For most realistic league play, when possible, allow only above pitchers preceded by an asterisk to start once every four games (3-game rest between starts). All other starting pitchers should start once every 5 games (4-game rest between starts). Also, we suggest that all 64 additional players (players with "a" before their name) be used in secondary roles.

When using Red Lucas of Cincinnati as a pitcher, use his player card for hitting instead of a pitcher's hitting card.

There is one player who does not have a team name on his card. You must write in the team name. Below is the player mentioned, teams played for and number of games played.
Fred Haney - Boston(AL) - 47 Chicago(NL) - 4

On the basic cards, if a pitcher has BOTH starter and relief listed on his card, check his advanced side to see if either is underlined. If so, consider that to be his primary pitching role on the team. If not, you should use that pitcher equally between starting and relieving.

This chart may be used in place of the ball park effect chart for those who wish to play with weather effects. The procedure to determine the weather is done only once - before the start of the game.

To use this chart, first locate the home teams' section of the chart. Then reference 1 of the 2 sections based on the month the game is played. Pick a split card and reading down find the range that the split card falls in. At this point look across the chart to the weather section which will indicate the weather conditions (good, average or bad). To the right of the weather conditions are ballpark effects numbers for this type of weather.

For instance, a day game is to be played at Boston (NL) during July. Say you picked split # 5. Reading down the chart (in the JUN/JUL/AUG section) the range this split falls into is 1-10. Now read across to the WEATHER section which indicates that the weather conditions are GOOD for this game;

the ballpark singles range would be 1-5 and the ballpark homerun range would be 0 (for both left and right handed batters).

Note that a range of 0 indicates an automatic out. A range of 20 indicates an automatic hit. If a ballpark reference falls outside the range then assume the following types of outs:

- BP Single left-handed batter - Lineout (2b)
- BP Single right-handed batter - Lineout (ss)
- BP Homerun left-handed batter - Flyball (rf) B
- BP Homerun right-handed batter - Flyball (lf) B

SUPER ADVANCED VERSION

In order to play the Super Advanced Version **ALL** symbols to the left of the numbers must be used. If you prefer to play the **Advanced Version only**, read the cards in the usual manner ignoring all symbols to the left of the numbers and all second readings.

Ω **CLUTCH HITTING** — Occurs only in two-out situations in which one or more runners are in scoring position (occupying second or third base). When such a situation exists, and a reading is rolled that has a **horseshoe** symbol to the left of it, the results of the reading are reversed in the following manner: if the reading results in any type of an out, automatically reverse it to a **SINGLE****; if the reading results in a single, automatically reverse it to a **popout**.

▼ **BALL PARK EFFECT - SINGLES** — Ignore all readings that have a ▼ to the left of it. Instead, read the results found underneath the ▼ symbol of the ball park effects card. To obtain results, refer to the appropriate home stadium and the batting stance (L=lefty or R=righty) of the hitter. Most likely, you will select a split card to determine the final outcome.

SUPER ADVANCED VERSION

◆ **BALL PARK EFFECT - HOMERUNS** — Ignore all readings that have a ◆ to the left of it. Instead, read the results found underneath the ◆ symbol of the ball park effects card. To obtain results, refer to the appropriate home stadium and the batting stance (L=lefty or R=righty) of the hitter. As in the advanced version, players with weak power (W) may not hit homeruns. In this situation, change all homerun results to single**.
